Tharindu Jayasuriya

Senior Software Engineer

Backend-leaning full-stack engineer with six years building payment and logistics systems where downtime costs money directly. I design for the 3am incident as much as the demo — observability, safe rollbacks and clear runbooks come as standard.

99.97%

uptime on payments

18 min

reconciliation, from 4 h

30k/day

dispatch assignments

EXPERIENCE

Senior Software Engineer

2023 – Present

Fintech scale-up · Colombo

- Rebuilt the settlement pipeline in Go, cutting end-of-day reconciliation from 4 hours to 18 minutes.
- Rolled out structured logging and tracing across 12 services; median incident diagnosis fell from 45 to 8 minutes.
- Led the migration of 3 TB of ledger data to a partitioned PostgreSQL cluster with zero downtime.
- Mentored four junior engineers, two since promoted.

Software Engineer

2021 – 2023

Logistics platform (remote) · Singapore

- Built the real-time driver dispatch service handling 30,000 assignments a day.
- Moved the team from nightly releases to continuous deployment; lead time dropped from 6 days to under an hour.
- Owned on-call for dispatch with zero SLA breaches over two years.

Software Developer

2019 – 2021

Software house · Colombo

- Delivered eleven client projects across retail and education in React and Node.js.
- Wrote the internal component library the team still uses today.
- Cut average page load on the largest client's storefront from 4.1 s to 1.3 s.

SELECTED PROJECTS

Settlement reconciliation engine — Event-sourced Go service that matches bank statements to internal ledgers and surfaces only genuine mismatches.

Open-source retry library — Idempotent retries with jittered backoff for TypeScript; 800+ weekly downloads.

Conference talk, 2025 — “What our payment outages taught us”, at a Colombo engineering meetup of 200+ developers.
